

Chapter 3 – Spine, spinal cord and peripheral nerves

There are many codes covering most clinical situations that require spinal surgery. The codes for spinal decompression and removal of disc fusion and instrumentation should be used singly and not be combined with other codes except in very unusual circumstances which must be agreed with us prior to surgery.

Spinal fusion includes bone grafting and this should not be charged as a separate procedure.

Spinal decompression includes the removal of disc matter and rhizolysis.

Spinal surgery is frequently multi-level surgery. For the purposes of billing, multi-level surgery is not considered a multiple service procedure and will not be reimbursed as such except in the cervical region.

Chemonucleolysis includes discography and this should not be charged as a separate procedure.

Codes V4100, V4120 and V4000 must only be used where the primary pathology is idiopathic adolescent scoliosis and not for any other purpose (specifically not for the correction of degenerative scoliosis).
